

# FPrint2 v5.32 for Win32

<b>Program Description</b>	<p>The FPrint2 application reads a file definition directly from the V2 Metadata data dictionary (from PSQlV10 and above) and dumps the information about a table to stdout in a usable report format. There are numerous switch options to support different output formats.</p> <p>This Win32 version of FPrint is Btrieve-based and will work on any Pervasive database.</p>
<b>Platform and Package</b>	Win32, GSLic, DDF Utility & Management Package
<b>Pricing</b>	\$50 Single-User, \$100 Site License; Full-Featured Trial Download Available
<b>Command Line Syntax and Help Screen</b>	<p>FPRINT2 Version 5.32: 01/14 (C)2025 Goldstar Software Inc.</p> <p>Usage: FPRINT2 ["&lt;TableName&gt;"] [/P=masterpassword] [/&lt;OptionList&gt;]</p> <p>This utility prints a description of the specified table from the V2 Data Dictionary in the current working directory. This report will include fields, types, lengths, indexes, and other information. The quotes are necessary only if &lt;TableName&gt; includes spaces. If &lt;TableName&gt; is *, a report for EVERY TABLE will be produced. Use the /P= option to provide the database Master Password. The option list may contain any of the following options:</p> <ul style="list-style-type: none"><li>B - Display Btrieve File Information.</li><li>F - Display Field Information.</li><li>O - Display Fields Location as Offset. (Default = Position)</li><li>C - Display Constraint Information.</li><li>I - Display Index Information.</li><li>U - Display Unique Values for Indexes. (Implies /I)</li><li>A - Display All of the Above.</li><li>X - Include System Tables In Wildcards.</li><li>N - Show Table Names Only (Ignores All Other Flags).</li></ul>
<b>Examples and Sample Usage</b>	<p>The options affect how the final display will look. Most of the above are self-explanatory and do not need documentation.</p> <p>The command "FPRINT2 * -N" will simply display a list of all table names in the dictionary. The command "FPRINT2 * -A &gt;FILES.TXT" will dump a printer-suitable report to the file FILES.TXT, with formfeeds between each table.</p>
<b>Other Information</b>	<p>FPrint2 is part of the DDF Utility &amp; Management Package.</p> <p>This utility reads V2 Metadata only. For V1 Metadata databases, use FPRINT.</p> <p>For more information on these utilities contact us at <a href="http://www.goldstarsoftware.com">www.goldstarsoftware.com</a></p>
<b>Version History</b>	<p>Version 5.0: First documented version to handle V2 Metadata.</p> <p>Version 5.1: Added support for new PSQlV10.20 data types.</p> <p>Version 5.2: Added better status code 12 error message.</p> <p>Version 5.21: Changed to use same license as FPrint.</p> <p>Version 5.22: Updated licensing code.</p> <p>Version 5.30: Reworked data load process for efficiency, and fixed an issue reporting BLOB/CLOB data types properly.</p> <p>Version 5.31: Added support for AutoTimeStamp and TimeStamp2 data types.</p> <p>Version 5.32: Fixed display issue with Offsets.</p>
<b>Known Problems</b>	None.
