# Downloading Pervasive PSQL v11 and Patches

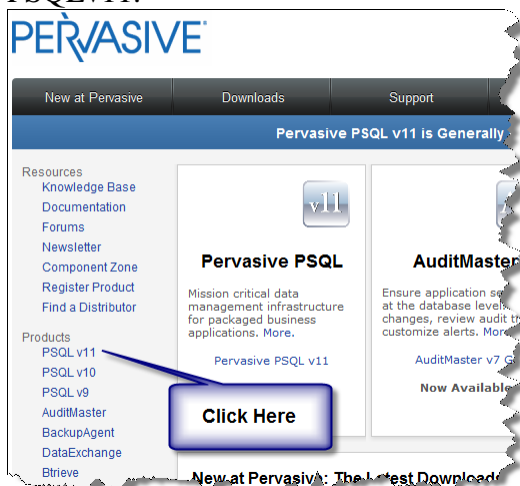

Last Updated: 05/07/2012

Pervasive's web site is not the most intuitive web site that's been created, so we have created these directions to help you download the proper files for your PSQLv11 environment. Please note that this is a paid upgrade from previous versions, so if you do not yet have a license for PSQLv11, please contact Goldstar Software for information on the pricing of this upgrade.

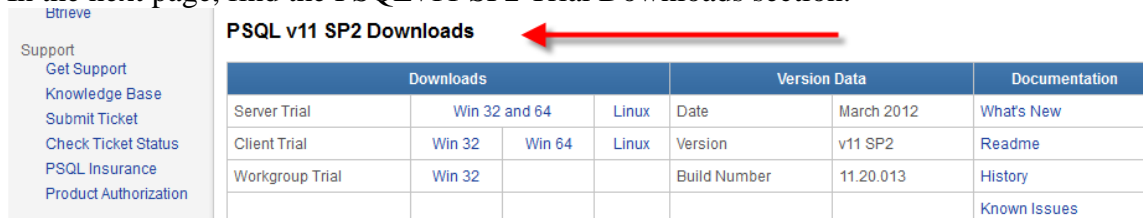

## Download the Trial Installation

You must FIRST download the Pervasive PSQL v11 SP2 Trial installation.

1. Use your web browser to go to [www.pervasedb.com](http://www.pervasedb.com) and click on the link for PSQLv11.

2. In the next page, find the PSQLv11 SP2 Trial Downloads section.

3. Now, download the appropriate version. If you have a Workgroup Engine, click to download the Workgroup Trial (Win32). If you have a Server Engine, download the "Win32 and Win64" Trial, and you will be able to install either.
4. If you see the Login box, then provide your Pervasive Web Site login information. If you forgot your password, or if you don't yet have an account, click the appropriate links on the bottom of the login window.

Information Provided By **Goldstar Software Inc.**

<http://www.goldstarsoftware.com>

5. When you see the Download box, click on North American Download Mirror (unless you are located closer to Pervasive's server in Europe).

6. If you are running more than a single-user system, you may wish to ALSO download the Client Trial (Win32), as this will need to be installed to each workstation in the network as well. You will NOT need the Win64 client unless you are also running a 64-bit Pervasive application (which is still very rare).

If you have any problems with this process, which is solely controlled by Pervasive Software, please contact them directly at 800-BTRIEVE for assistance.

## Download the Update Patch (If You Prefer)

Pervasive released PSQLv11 in September 2011, the full Service Pack 1 in July 2011, and SP2 in March 2012. If you are running an older v11.00 release, then we first recommend updating to the Service Pack 2 release, as discussed in the previous section. You should also check to see if there are any updates above this release and apply them, as well. (You may also wish to check back periodically for newer updates.)

1. Use your web browser to go to [www.pervasedb.com](http://www.pervasedb.com) and click on the link for PSQLv11.

2. In the next page, find the PSQLv11 Updates section.

**PSQL v11 Updates** ←

	Downloads			Version Data	Documentation
<b>v11 SP2 Update:</b>	PSQL v11 SP2 Updates are the same as SP2 Downloads above.				
Server Update	Win 32 and 64	Linux	Date	March 2012	Readme for v11 SP2
Client Update	Win 32	Win 64	Update version	v11 SP2	
Workgroup Update	Win 32		Build Number	11.20.013	

3. Now, download the appropriate update. If you have a Workgroup Engine, click to download the Workgroup Update (Win32). If you have a Server Engine, download the Server Update. Be sure to also download the Client Update if you are running a multi-user system.

*NOTE: At this time, there have been no new updates for SP2, and the text in the box shown even indicates that these updates are the SAME as the SP2 downloads. This will change when Pervasive releases a set of updates for SP2.*

4. If you see the Login box, then provide your Pervasive Web Site login information. If you forgot your password, or if you do not yet have an account,

click the appropriate links on the bottom of the login window.

5. When you see the Download box, click on North American Download Mirror (unless you are located closer to Pervasive's server in Europe).

6. If you are running more than a single-user system, you should ALSO download the Client Update (Win32), as this will need to be installed to each workstation in the network as well. You will NOT need the Win64 client unless you are also running a 64-bit Pervasive application (which is still very rare).

If you have any problems with this process, which is solely controlled by Pervasive Software, please contact them directly at 800-BTRIEVE for assistance.

If you are not comfortable with this, we do offer a complete set of installation services to handle this for you at a fixed price. For more information, contact us at 1-708-647-7665 or visit <http://www.goldstarsoftware.com>.
